Frank --

I wanted to follow up from the conversation that we had at the Cranston Public Meeting last week. You indicated verbally that you had no further comments on the Sediment IRM report with the information provided below regarding the backfill volume. Would you be able to confirm by email for our files?

Best,

Joanne

Frank –

Sorry for the delay in getting the information you requested. The backfill material volume was 22.63 cubic yards and the sediment removed was 22.6 cubic yards (stated as approximately 23 cubic yds in the report).

Please let me know if you require any additional information.

Thanks,

Joanne
